The frame is a riveted frame, and the longitudinal beams are riveted with 12+12 double-layer superimposed grooves and bedding plates, and the local 4-layer reinforcement is used, good deformation design and adaptation, and suitable for mass production. The material is upgraded from 510L to 610L, with better fatigue resistance. It is adopted to cooperate with the designed and fitted electrical system analysis.

+

The front suspension is a torsion bar independent suspension, the wheel position is reliable, and the driving is stable and comfortable. The front suspension is a torsion bar independent suspension, which greatly alleviates the impact of uneven road surface, attenuates vibration, and reduces the driving comfort; the middle and rear axles are connected to the frame through leaf springs and tie rods. It can adapt to various load conditions, and has high reliability.

The engine technology is advanced, and the energy efficiency and energy saving. The three-stage filter, realizes a low maintenance cost that is 1/3 of the oil filter. The exhaust system is optimized, uses optimized design and realizes the full exhaust backpressure. The silencer has a strong anti-vibration ability and is easy to maintain; the optimized air intake volume and low flow resistance; the low speed vehicle has a large load capacity. The oil supply system uses a three-stage filtration function to fully protect the engine and the oil - pressure cooling injection system.

Parameter	Unit	Value	Parameter	Unit	Value
Curb Weight	kg	35000	Engine Model	/	YCK15765-T300
Rated Payload	kg	75000	Engine Displacement	L	15.26
Max. Speed	km/h	45(MT) / 41(AT)	Rated Power	kW	563
Max. Gradeability	%	33	Max. Torque	N·m	3000 N·m / 1100~1500 / min
Minimum Turning Radius	m	12	Transmission	/	FAST 8DS260 (MT) / FC6A250 (AT)
Capacity	m³	51 (2:1)	Steering System	/	
Tires	/	16.00R25	Auxiliary Braking	/	+
